GCE Examinations

Further Pure Mathematics Module FP2

Advanced Subsidiary / Advanced Level

Paper A

Time: 1 hour 30 minutes

Instructions and Information

Candidates may use any calculator except those with a facility for symbolic algebra and / or calculus.

Full marks may be obtained for answers to ALL questions.

Mathematical and statistical formulae and tables are available.

This paper has 8 questions.

Advice to Candidates

You must show sufficient working to make your methods clear to an examiner. Answers without working will gain no credit.

1. A curve has the equation

$$y = x + 2x^2 + 5x^3.$$

Show that the radius of curvature of the curve at the origin is $\dfrac{1}{\sqrt{2}}$. **(5 marks)**

---

2. Show that

$$\int_0^{\ln 2} x \operatorname{sech}^2 x \ dx = \frac{3}{5}\ln 2 - \ln\left(\frac{5}{4}\right).$$ **(8 marks)**

---

3. *(a)* Prove that

$$\frac{d}{dx}(\arcsin 2x) = \frac{2}{\sqrt{1 - 4x^2}}.$$ **(3 marks)**

Given that

$$f(x) = 2x \arcsin 2x + \sqrt{1 - 4x^2},$$

(b) show that

$$f''(x)\left[f(x) - xf'(x)\right] = 4.$$ **(6 marks)**

4.

Fig. 1

The parametric coordinates of the curve C shown in Figure 1 are

$$x = t^2, \qquad y = t - \tfrac{1}{3}t^3, \qquad 0 \le t \le a.$$

The curve C meets the x-axis at the point A where $t = a$.

(a)   Find the value of a.   **(2 marks)**

The curve C is rotated through 2π about Ox.

(b)   Find the surface area of the solid generated.   **(8 marks)**

---

5.   *(a)*   Using the definitions of $\cosh x$ and $\sinh x$ in terms of e^x and e^{-x}, prove that

$$\cosh 2x = 2\cosh^2 x - 1.$$ **(3 marks)**

   (b)   Solve the equation

$$2\cosh 2x = 13\cosh x - 12,$$

   giving your answers in terms of natural logarithms.   **(7 marks)**

Turn over

6.
$$x^2 - 10x + 41 \equiv (x+a)^2 + b.$$

(a) Find the values of the constants a and b. **(2 marks)**

(b) Show that

$$\int_5^9 \frac{x}{\sqrt{x^2 - 10x + 41}} \ dx = p\left(\sqrt{2} - 1\right) + q \ln r,$$

stating your values of p, q and r. **(8 marks)**

7.
$$I_n = \int_0^{\frac{\pi}{2}} x^n \cos x \ dx, \qquad n \geq 0.$$

(a) Prove that

$$I_n = \left(\frac{\pi}{2}\right)^n - n(n-1)I_{n-2} \quad n \geq 2.$$ **(5 marks)**

(b) Hence find the value of I_4, giving your answer in terms of π. **(6 marks)**

---

8. The rectangular hyperbola C has equation $xy = c^2$, where c is a positive constant.

(a) Show that an equation of the tangent to C at the point $P\left(cp, \dfrac{c}{p}\right)$ is

$$x + yp^2 = 2cp.$$ **(4 marks)**

The tangent to C at P meets the x-axis at the point X.

The point Q on C has coordinates $\left(cq, \dfrac{c}{q}\right)$, $q \neq p$ such that QX is parallel to the y-axis.

(b) Show that $q = 2p$. **(3 marks)**

M is the mid-point of PQ.

(c) Find, in Cartesian form, an equation of the locus of M as p varies. **(5 marks)**

END
