## Mark scheme

June 2021
Version: 1.0 Final Mark Scheme

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

## Copyright information

AQA retains the copyright on all its publications. However, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

## Mark scheme instructions to examiners

## General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- marking instructions that indicate when marks should be awarded or withheld including the principle on which each mark is awarded. Information is included to help the examiner make his or her judgement and to delineate what is creditworthy from that not worthy of credit
- a typical solution. This response is one we expect to see frequently. However credit must be given on the basis of the marking instructions.

If a student uses a method which is not explicitly covered by the marking instructions the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

## Key to mark types

| $M$ | mark is for method |
| :--- | :--- |
| $R$ | mark is for reasoning |
| A | mark is dependent on M marks and is for accuracy |
| B | mark is independent of $M$ marks and is for method and accuracy |
| E | mark is for explanation |
| F | follow through from previous incorrect result |

## Key to mark scheme abbreviations

| CAO | correct answer only |
| :--- | :--- |
| CSO | correct solution only |
| ft | follow through from previous incorrect result |
| 'their' | indicates that credit can be given from previous incorrect result |
| AWFW | anything which falls within |
| AWRT | anything which rounds to |
| ACF | any correct form |
| AG | answer given |
| SC | special case |
| OE | or equivalent |
| NMS | no method shown |
| PI | possibly implied |
| sf | significant figure(s) |
| dp | decimal place(s) |

Examiners should consistently apply the following general marking principles:

## No Method Shown

Where the question specifically requires a particular method to be used, we must usually see evidence of use of this method for any marks to be awarded.

Where the answer can be reasonably obtained without showing working and it is very unlikely that the correct answer can be obtained by using an incorrect method, we must award full marks. However, the obvious penalty to candidates showing no working is that incorrect answers, however close, earn no marks.

Where a question asks the candidate to state or write down a result, no method need be shown for full marks.

Where the permitted calculator has functions which reasonably allow the solution of the question directly, the correct answer without working earns full marks, unless it is given to less than the degree of accuracy accepted in the mark scheme, when it gains no marks.

Otherwise we require evidence of a correct method for any marks to be awarded.

## Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

## Work erased or crossed out

Erased or crossed out work that is still legible and has not been replaced should be marked. Erased or crossed out work that has been replaced can be ignored.

## Choice

When a choice of answers and/or methods is given and the student has not clearly indicated which answer they want to be marked, mark positively, awarding marks for all of the student's best attempts. Withhold marks for final accuracy and conclusions if there are conflicting complete answers or when an incorrect solution (or part thereof) is referred to in the final answer.

## AS/A-level Maths/Further Maths assessment objectives

| AO |  |  |
| :--- | :--- | :--- |
| AO1 | AO1.1a | Select routine procedures |
|  | AO1.1b | Correctly carry out routine procedures |
|  | AO1.2 | Accurately recall facts, terminology and definitions |
|  | AO2.1 | Construct rigorous mathematical arguments (including proofs) |
|  | AO2.2a | Make deductions |
|  | AO2.2b | Make inferences |
|  | AO2.3 | Assess the validity of mathematical arguments |
|  | AO2.4 | Explain their reasoning |
| AO2.5 | Use mathematical language and notation correctly |  |
|  | AO3.1a | Translate problems in mathematical contexts into mathematical processes |
|  | AO3.1b | Translate problems in non-mathematical contexts into mathematical processes |
|  | AO3.2a | Interpret solutions to problems in their original context |
|  | AO3.2b | Where appropriate, evaluate the accuracy and limitations of solutions to problems |
|  | AO3.3 | Translate situations in context into mathematical models |
|  | AO3.4 | Use mathematical models |
|  | AO3.5a | Evaluate the outcomes of modelling in context |
|  | AO3.5b | Recognise the limitations of models |
|  | AO3.5c | Where appropriate, explain how to refine models |

| $\mathbf{Q}$ | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{1}$ | Circles correct answer | 1.1 b | B1 | 104 |
|  |  | Total |  | $\mathbf{1}$ |

| $\mathbf{Q}$ | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{2}$ | Circles correct answer | 1.1 b | B1 | Po(18) |
|  |  | Total |  | $\mathbf{1}$ |

| $\mathbf{Q}$ | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{3 ( a )}$ | Uses the formula for the mean <br> of a discrete uniform distribution <br> to form an equation <br> Condone one sign error | 1.1 a | M 1 | $\frac{n+1}{2}=8$ <br> Completes a rigorous algebraic <br> proof by solving the equation to <br> show that $n=15$ |
|  | 2.1 | R 1 | $n=15$ |  |
|  | Total |  | $\mathbf{2}$ |  |

| $\mathbf{Q}$ | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 3(b) | Obtains correct value of $\mathrm{P}(X>4)$ | 1.1 b | B 1 | $\mathrm{P}(X>4)=11 \times \frac{1}{15}=\frac{11}{15}$ |
|  | Total |  | $\mathbf{1}$ |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 3(c) | Uses the formula for the <br> variance of a discrete uniform <br> distribution <br> Pl | 1.1 a | M 1 | $\operatorname{Var}(X)=\frac{15^{2}-1}{12}$ |
|  | Obtains $\operatorname{Var}(X)=\frac{56}{3}$ | 1.1 b | A 1 | $=\frac{56}{3}$ |
|  | Total |  | $\mathbf{2}$ |  |

|  | Question total |  | 5 |  |
| :--- | :--- | :--- | :--- | :--- |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 4(a) | Obtains correct $z$ value <br> AWRT 1.81 <br> PI by a correct value of $\sqrt{n}$ or $n$ | 1.1 b | B 1 | $z=1.8119$ |
|  | Uses formula for the full or half <br> width of a confidence interval <br> using their $z$-value to obtain an <br> equation and attempts to solve, <br> reaching at least <br> $\sqrt{n}=$ <br> PI | 1.1 a | M 1 | $\sqrt{n}=1.8119 \times \frac{0.3}{0.02715}$ |
|  | Obtains the correct value of <br> $n=400$ or 401 depending on <br> accuracy given for $z$ | 1.1 b | A 1 | $n=401$ |
|  |  | $\mathbf{3}$ |  |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 4(b) | Obtains correct confidence <br> interval | 1.1 b | B1 | $(10.773,10.827)$ |
|  | Total |  | $\mathbf{1}$ |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 4(c)(i) | Evaluates the model by <br> comparing the proposed <br> population mean with their <br> confidence interval found in <br> part (b) and concludes that the <br> null hypothesis will be rejected | 3.5 a | E1F | The null hypothesis will be rejected <br> as 10.7 is outside the confidence <br> interval |
|  | Total |  |  | $\mathbf{1}$ |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 4(c)(ii) | Interprets Type II error in <br> context | 3.2a | E1 | It is accepted that the mean <br> distance travelled by the player in a <br> football match is 10.7 kilometres <br> when it is not |
|  | Total |  | $\mathbf{1}$ |  |

|  | Question total |  | 6 |  |
| :--- | :--- | :--- | :--- | :--- |

| $\mathbf{Q}$ | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 5(a) | States correct modal score | 1.1 b | B1 | Modal score $=10$ |
|  | Total |  | $\mathbf{1}$ |  |

| Q | Marking instructions | AO | Marks | Typical solution |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5(b) | Models the situation with a discrete random variable (PI) | 3.1b | M1 |  | 0 | 5 | 10 | 20 |
|  |  |  |  | $\mathrm{P}(X \leq x)$ | 0.25 | 0.55 | 0.9 | 1 |
|  |  |  |  |  |  |  |  |  |
|  | Obtains correct median score | 3.2a | A1 |  |  |  |  |  |
|  | Total |  | 2 |  |  |  |  |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{5 ( c )}$ | Uses the formula for the mean <br> of a discrete random variable to <br> calculate the mean score or <br> adjusts model to directly model <br> prize money | 3.4 | M1 | Mean score $=$ <br> $0 \times 0.25+5 \times 0.3+10 \times 0.35+20$ <br> $\times 0.1$ |
| $=7$ |  |  |  |  |
|  | Obtains correct mean prize <br> money | 3.2 a | A1 | Mean prize money $=7 \times 100$ <br> $=£ 700$ |
|  | Total |  | $\mathbf{2}$ |  |

|  | Question total |  | 5 |  |
| :--- | :--- | :--- | :--- | :--- |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{6 ( a )}$ | Integrates $\int_{0}^{m} \frac{1}{114}(4 x+7) \mathrm{d} x$ and <br> equates with 0.5 | 1.1 a | M 1 | $\int_{0}^{m} \frac{1}{114}(4 x+7) \mathrm{d} x=0.5$ |
|  | Obtains correct quadratic <br> equation in terms of the median <br> equal to zero <br> Pl | 1.1 a | M 1 | $\frac{1}{114}\left(2 m^{2}+7 m\right)=0.5$ |
|  | Completes rigorous argument to <br> show that median is 3.87 to 3 <br> significant figures. A more <br> accurate answer must be seen <br> and the other solution from the <br> quadratic equation must be <br> rejected if seen. | 2.1 | R 1 | $m=3.87(3$ sig fig $)$ |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{6 ( b )}$ | Uses an integral of $\mathrm{f}(x)$ with one <br> limit of 2 <br> PI | 1.1 a | M 1 | $\mathrm{P}(X>2)=\int_{2}^{6} \frac{2}{57} x+\frac{7}{114} \mathrm{~d} x$ |
|  | Obtains the correct exact value <br> of $\mathrm{P}(X>2)$ | 1.1 b | A1 | $=\frac{5}{57}$ |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 6(c)(i) | Uses the general formula for $\mathrm{E}(\mathrm{f}(Y))$ to obtain $\mathrm{E}\left(\frac{1}{Y}\right)$ | 1.1a | M1 | $\begin{aligned} & \mathrm{E}\left(\frac{1}{Y}\right)=\int_{1}^{3} y^{-1}\left(\frac{1}{2} y^{2}-\frac{1}{6} y^{3}\right) \mathrm{d} y \\ & =\frac{5}{9} \\ & \mathrm{E}\left(\frac{1}{Y^{2}}\right)=\int_{1}^{3} y^{-2}\left(\frac{1}{2} y^{2}-\frac{1}{6} y^{3}\right) \mathrm{d} y \\ & =\frac{1}{3} \end{aligned}$ |
|  | Uses the general formula for $\mathrm{E}(\mathrm{f}(Y))$ to obtain $\mathrm{E}\left(\frac{1}{Y^{2}}\right)$ | 1.1a | M1 |  |
|  | Uses the formula for the variance to obtain an expression for $\operatorname{Var}\left(\frac{1}{Y}\right)$ | 1.1a | M1 | $\begin{aligned} & \operatorname{Var}\left(\frac{1}{Y}\right)=\mathrm{E}\left(\frac{1}{Y^{2}}\right)-\left(\mathrm{E}\left(\frac{1}{Y}\right)\right)^{2} \\ & =\frac{1}{3}-\left(\frac{5}{9}\right)^{2} \end{aligned}$ |
|  | Completes a rigorous argument to obtain the given value of $\operatorname{Var}\left(\frac{1}{Y}\right)$ | 2.1 | A1 | $=\frac{2}{81}$ |
|  | Total |  | 4 |  |

| Q Marking instructions AO Marks Typical solution <br> $\mathbf{6 ( c )}$ (ii) Uses correct general formula for <br> the sum of linear functions of <br> independent variables and to <br> obtain an expression for <br> $\operatorname{Var}\left(A X-\frac{B}{Y}\right)$ <br> Condone sign error 1.1 a $\mathrm{M1}$ $\operatorname{Var}\left(2 X-\frac{3}{Y}\right)$ <br> $=2^{2} \operatorname{Var}(X)+3^{2} \operatorname{Var}\left(\frac{1}{Y}\right)$     |
| :--- |
|  |
| Obtains the correct value of <br> $\operatorname{Var}\left(2 X-\frac{3}{Y}\right)$ <br> AWRT 10.6 |

|  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: |
