Paper 1
Mark scheme
June 2022
Version: 1.1 Final Mark Scheme

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

## Copyright information

AQA retains the copyright on all its publications. However, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

## Mark scheme instructions to examiners

## General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- marking instructions that indicate when marks should be awarded or withheld including the principle on which each mark is awarded. Information is included to help the examiner make his or her judgement and to delineate what is creditworthy from that not worthy of credit
- a typical solution. This response is one we expect to see frequently. However credit must be given on the basis of the marking instructions.

If a student uses a method which is not explicitly covered by the marking instructions the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

## Key to mark types

| M | mark is for method |
| :--- | :--- |
| $R$ | mark is for reasoning |
| A | mark is dependent on M marks and is for accuracy |
| B | mark is independent of M marks and is for method and accuracy |
| E | mark is for explanation |
| F | follow through from previous incorrect result |

## Key to mark scheme abbreviations

| CAO | correct answer only |
| :--- | :--- |
| CSO | correct solution only |
| ft | follow through from previous incorrect result |
| 'their' | Indicates that credit can be given from previous incorrect result |
| AWFW | anything which falls within |
| AWRT | anything which rounds to |
| ACF | any correct form |
| AG | answer given |
| SC | special case |
| OE | or equivalent |
| NMS | no method shown |
| PI | possibly implied |
| sf | significant figure(s) |
| dp | decimal place(s) |

## AS/A-level Maths/Further Maths assessment objectives

| AO |  |  |
| :--- | :--- | :--- |
| AO1 | AO1.1a | Select routine procedures |
|  | AO1.1b | Correctly carry out routine procedures |
|  | AO1.2 | Accurately recall facts, terminology and definitions |
|  | AO2.1 | Construct rigorous mathematical arguments (including proofs) |
|  | AO2.2a | Make deductions |
|  | AO2.2b | Make inferences |
|  | AO2.4 | Explain their reasoning |
|  | AO2.5 | Use mathematical language and notation correctly |
|  | Translate problems in mathematical contexts into mathematical processes |  |
|  | AO3.1b | Translate problems in non-mathematical contexts into mathematical processes |
|  | AO3.2a | Interpret solutions to problems in their original context |
|  | AO3.2b | Where appropriate, evaluate the accuracy and limitations of solutions to problems |
|  | AO3.3 | Translate situations in context into mathematical models |
|  | AO3.4 | Use mathematical models |
|  | AO3.5a | Evaluate the outcomes of modelling in context |
|  | AO3.5b | Recognise the limitations of models |
|  | AO3.5c | Where appropriate, explain how to refine models |

Examiners should consistently apply the following general marking principles

## No Method Shown

Where the question specifically requires a particular method to be used, we must usually see evidence of use of this method for any marks to be awarded.

Where the answer can be reasonably obtained without showing working and it is very unlikely that the correct answer can be obtained by using an incorrect method, we must award full marks. However, the obvious penalty to students showing no working is that incorrect answers, however close, earn no marks.

Where a question asks the student to state or write down a result, no method need be shown for full marks.

Where the permitted calculator has functions which reasonably allow the solution of the question directly, the correct answer without working earns full marks, unless it is given to less than the degree of accuracy accepted in the mark scheme, when it gains no marks.

Otherwise we require evidence of a correct method for any marks to be awarded.

## Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

## Work erased or crossed out

Erased or crossed out work that is still legible and has not been replaced should be marked. Erased or crossed out work that has been replaced can be ignored.

## Choice

When a choice of answers and/or methods is given and the student has not clearly indicated which answer they want to be marked, mark positively, awarding marks for all of the student's best attempts. Withhold marks for final accuracy and conclusions if there are conflicting complete answers or when an incorrect solution (or part thereof) is referred to in the final answer.

| $\mathbf{Q}$ | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{1}$ | Circles the correct answer | 1.2 | B 1 | $x^{2}+y^{2}=1$ |
|  | Question 1 Total |  | $\mathbf{1}$ |  |

| $\mathbf{Q}$ | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{2}$ | Circles the correct answer | 1.1 b | B1 | 2 |
|  |  |  | 1 |  |

| $\mathbf{Q}$ | Marking instructions | $\mathbf{A O}$ | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{3}$ | Circles the correct answer | 2.2 a | R 1 | $y=2 \log _{4} x$ |
|  | Question 3 Total |  | $\mathbf{1}$ |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :---: |
| $\mathbf{4}$ | Ticks the correct box | 2.2 a | R 1 |  |
|  |  |  |  |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{5}$ | Differentiates to obtain a correct <br> derivative either <br> $4(x-2)^{3}$ OE <br> or <br> $4 x^{3}-24 x^{2}+48 x-32$ <br> PI by -32 obtained with no <br> errors seen in evaluating $\frac{\mathrm{d} y}{\mathrm{~d} x}$ | 1.1 b | B1 |  |
|  | Substitutes $x=0$ into their $\frac{\mathrm{d} y}{\mathrm{~d} x}$ <br> obtain a numerical value <br> or <br> PI by constant from their $\frac{\mathrm{d} y}{\mathrm{~d} x}$ <br> or <br> PI by -32 obtained with no <br> errors seen in evaluating $\frac{\mathrm{d} y}{\mathrm{~d} x}$ | 1.1 a | M1 | $\frac{\mathrm{d} y}{\mathrm{~d} x}=4(x-2)^{3}$ |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{6 ( a )}$ | Expands to obtain the first two <br> terms <br> Can be unsimplified <br> Condone sign error | 1.1 a | M1 |  |
|  | $\left.\begin{array}{l}\text { Obtains } 1-\frac{1}{4} x \text { OE } \\ \\ \\ \begin{array}{l}\text { Accept if listed as two separate } \\ \text { terms. Ignore any extra terms }\end{array}\end{array} 1-\frac{x}{2}\right)^{\frac{1}{2}} \approx 1+\left(\frac{1}{2}\right)\left(-\frac{x}{2}\right)$ |  |  |  |
|  | Subtotal |  | $\approx 1-\frac{1}{4} x$ |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 6(b) | States or uses at least one small angle approximation correctly either $\sin k x \approx k x \text { or } \sqrt{\cos x} \approx \sqrt{1-\frac{x^{2}}{2}}$ | 3.1a | M1 | $\begin{aligned} \sin (4 x)+\sqrt{\cos x} & \approx 4 x+\sqrt{1-\frac{x^{2}}{2}} \\ & \approx 4 x+\left(1-\frac{x^{2}}{4}\right) \\ & \approx 1+4 x-\frac{1}{1} x^{2} \end{aligned}$ |
|  | Uses both small angle approximations correctly for sine and cosine $\sin k x \approx k x \text { and } \sqrt{\cos x} \approx \sqrt{1-\frac{x^{2}}{2}}$ <br> Must have eliminated all trig expressions Inconsistent variables for angles must eventually be consistent to be awarded A1 | 1.1b | A1 |  |
|  | Uses their expansion from (a) Must have replaced $x$ with $x^{2}$ or Applies binomial theorem correctly to $\left(1-\frac{x^{2}}{2}\right)^{\frac{1}{2}}$ ignore any extra terms | 3.1a | M1 |  |
|  | Completes argument to obtain $4 x+\left(1-\frac{x^{2}}{4}\right)$ or $1+4 x-\frac{1}{4} x^{2}$ <br> Accept any order of terms Ignore higher powers of $x$ Must be in terms of $x$ Do not ISW | 2.1 | R1 |  |
|  | Subtotal |  | 4 |  |

## Question 6 Total

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 7 | Sketches one of the sections of the curve shown below Either <br> or <br> Condone translations Do not allow the end points of the curve turning to intersect the asymptote <br> Sketches the three branches within the interval from 0 to $2 \pi$ Condone overlapping branches Asymptotes need not be drawn <br> Completes fully correct sketch with asymptotes drawn at approximately the correct positions <br> Labelling not required and can be ignored Ignore anything after $2 \pi$ or to the left of $O$ | 1.2 | B1 |  |
|  | Question 7 Total |  | 3 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 8(a)(i) | Obtains correct $y$-intercept at $P$ $(0,5)$ or $y=5$ seen anywhere PI by correct equation for line PQ | 3.1a | B1 | $\begin{aligned} & \text { At } P \\ & x=0 \Rightarrow y=5 \\ & \text { Line } P Q \\ & 3 x-5 y=-25 \\ & 5 x+3 y=83 \\ & (10,11) \end{aligned}$ |
|  | Obtains equation of $P Q$ with correct gradient. For example $y=\frac{3}{5} x+c \text { or } 5 y-3 x=k$ <br> or <br> Forms an equation for the distance or distance squared from $(0,5)$ to a point on $L_{2}$ For example, $d^{2}=x^{2}+\left(-\frac{5}{3} x+\frac{68}{3}\right)^{2}$ | 3.1a | M1 |  |
|  | Obtains correct equation ACF | 1.1b | A1 |  |
|  | Solves simultaneous equations for their $P Q$ and $\mathrm{L}_{2}$ to obtain values for $x$ and $y$ Their $P Q$ must not be a horizontal or vertical line Condone errors in rearrangement of the equation(s) or Minimises their distance or distance squared equation to find one coordinate | 3.1 a | M1 |  |
|  | Obtains (10, 11) or $x=10, y=11$ | 1.1b | A1 |  |
|  | Subtotal |  | 5 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :---: |
| 8(a)(ii) | Uses the distance formula to <br> find the value of $P Q$ or $P Q^{2}$ <br> or <br> Uses Pythagoras theorem with <br> $10^{2}+6^{2}$ seen <br> If the coordinates of $P$ and $Q$ are <br> incorrect, differences in $x$ and $y$ <br> must be clearly shown for M1 | 1.1 a | M 1 |  |
|  | Completes demonstration to <br> show that $k=2$ <br> Must have shown clear use of <br> distance formula <br> Condone not seeing $x=0$ <br> substituted in the distance <br> formula <br> Answer of $2 \sqrt{34}$ and no working <br> shown scores M1 R0 | 2.1 | R 1 | $P Q=\sqrt{136}=2 \sqrt{34}$ |
|  | Subtotal |  | 2 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 8(b)(i) | Uses a valid method to find $a$. Evidence could be: <br> Forming the equation of the line mid-way between $\mathrm{L}_{1}$ and $\mathrm{L}_{2}$ $5 x+3 y=49$ seen or Using ( $a,-17$ ) as the mid-point of a line segment from $L_{1}$ to $L_{2}$ For example: $\begin{array}{ll} 5 x+3(-17)=15 & x=13.2 \\ 5 x+3(-17)=83 & x=26.8 \\ a=\frac{(26.8+13.2)}{2}=20 \end{array}$ <br> or <br> Finding the mid-point of $P Q$ their $(5,8)$ and using the gradient of $L_{1}$ and $L_{2}=-\frac{5}{3}$ <br> For example: $\begin{aligned} & 8+5(-5)=-17 \\ & a=5+5(3)=20 \end{aligned}$ <br> or <br> Substitutes $y=17$ and $x=a$ into $y=\frac{3}{5} x+5$ | 3.1a | M1 | $\begin{aligned} & 5 x+3 y=49 \\ & 5 a+3(-17)=49 \\ & a=20 \end{aligned}$ |
|  | Deduces $a=20$ | 2.2a | R1 |  |
|  | Subtotal |  | 2 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :---: |
| 8(b)(ii) | Forms expression of the form <br> $(x \pm a)^{2}+(y \pm 17)^{2}$ <br> using $a$ or their value of $a$ | 1.1 a | M1 |  |
|  | Obtains correct equation for <br> their value of $a$ and their <br> radius ${ }^{2}=\frac{17 k^{2}}{2}$ from part (a)(ii) <br> for an integer value of $k$ <br> Condone $(\sqrt{34})^{2}$ | 1.1 b | A1F | $(x-20)^{2}+(y+17)^{2}=34$ |
|  | Subtotal |  |  |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 9(a) | Forms an appropriate equation in $x$ only by either using the differences of at least one pair of terms or <br> Using the mean of the first and third term = the second term Condone missing brackets or <br> Forms two simultaneous equations in $x$ and $d$ or <br> Substitutes $x=5$ and demonstrates that the three terms obtained, 15, 26 and 37 have a common difference of 11 or <br> Shows that the sum formula for an arithmetic series works when $x=5$ <br> The approaches that substitute $x=5$ score a maximum of M1 A0 R0 | 3.1a | M1 | $\begin{aligned} & 5 x+1-(2 x+5)=6 x+7-(5 x+1) \\ & 3 x-4=x+6 \\ & x=5 \end{aligned}$ <br> Therefore $x=5$ is the only solution |
|  | Obtains a correct equation or <br> Obtains two correct simultaneous equations in $x$ and d <br> Need not be simplified | 1.1b | A1 |  |
|  | Solves to conclude that $x=5$ is the only solution Must include the word 'only' OE | 2.1 | R1 |  |
|  | Subtotal |  | 3 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 9(b)(i) | Obtains 15 | 1.1 b | B1 | $a=15$ |
|  |  | Subtotal |  | $\mathbf{1}$ |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 9(b)(ii) | Obtains 11 | 1.1 b | B1 | $d=11$ |
|  |  | Subtotal |  | $\mathbf{1}$ |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 9(c) | Forms an expression for the sum to $N$ or $N+1$ terms using their $a$ and $d$ values Need not be simplified Condone missing brackets or use of $n$ or Uses a trial and improvement method obtaining sums for two different values of $n$ | 3.1a | M1 | $\begin{aligned} & S_{N}=\frac{N}{2}(2 \times 15+11(N-1)) \\ & \frac{N}{2}(2 \times 15+11(N-1))=100000 \\ & N=133.9 \ldots \\ & N=133 \end{aligned}$ |
|  | Forms an equation or inequality using their expression and $100000 \pm k$ where $0 \leq k \leq 11$ or Uses trial and improvement to obtain one sum below 100000 and one sum above 100000 for consecutive integers | 1.1a | M1 |  |
|  | Obtains either 133.9.. or 132.9.. or $N>132 \text { or } N<134$ <br> or <br> Obtains the sum of 98553 when $n=133$ and obtains the sum of 100031 when $n=134$ | 1.1b | A1 |  |
|  | Obtains 133 having solved a correct quadratic <br> This mark can be recovered if $N=133$ and $N=134$ are correctly checked | 3.2a | A1 |  |
|  | Subtotal |  | 4 |  |

|  | Question 9 Total |  | 9 |  |
| :--- | :--- | :--- | :--- | :--- |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 10(a) | Recalls or uses the area of sector $=\frac{1}{2} r^{2} \theta$ $r$ can be any letter or $O A$ or $O B$ or any consistent value throughout | 1.2 | B1 | Area of sector $=\frac{1}{2} r^{2} \theta$ <br> Area of triangle $=\frac{1}{2} a b \sin C$ |
|  | Forms an equation relating the area of the triangle $O A C$ and sector using $\frac{1}{2} b h=k \frac{1}{2} r^{2} \theta$ where $k>0$ | 3.1a | M1 | Hence $\frac{1}{2} a b \sin C=\left(\frac{1}{2}\right) \frac{1}{2} r^{2} \theta$ |
|  | Deduces area of triangle is $\frac{1}{2} r \cos \theta \times r \sin \theta \text { OE }$ <br> Must use trigonometry for height and base | 2.2a | B1 | $\frac{1}{2} r^{2} \sin \theta \cos \theta=\frac{1}{2}\left(\frac{1}{2} r^{2} \theta\right)$ |
|  | Completes reasoned argument with clear use of double angle identity to show that $\theta=\sin 2 \theta$ or $\sin 2 \theta=\theta$ | 2.1 | R1 | $\begin{aligned} 2 \sin \theta \cos \theta & =\theta \\ \theta & =\sin 2 \theta\end{aligned}$ |
|  | Subtotal |  | 4 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{1 0 ( b )}$ | Rearranges to obtain <br> $\theta-\sin 2 \theta=0$ or $\sin 2 \theta-\theta=0$ <br> (which may be seen in <br> conclusion) and evaluates <br> $\theta-\sin 2 \theta$ or $\sin 2 \theta-\theta$ at <br> $\frac{\pi}{5}(0.6284)$ and $\frac{2 \pi}{5}(1.257)$ <br> Evaluates using any two other <br> appropriate values inside the <br> interval but either side of root. | 1.1 a | M 1 |  |
|  | Completes reasoned argument <br> with reference to change of sign <br> and evidence of correct <br> evaluation accepting values <br> rounded or truncated to 1 sf <br> Must refer to $\frac{\pi}{5}$ and $\frac{2 \pi}{5}$ in the <br> conclusion | 2.1 | R 1 | $\mathrm{f}\left(\frac{2 \pi}{5}\right)=0.6688 \ldots>0$ |
| Hence solution lies |  |  |  |  |
| between $\frac{\pi}{5}$ and $\frac{2 \pi}{5}$ |  |  |  |  |
| Let $\mathrm{f}(\theta)=\theta-\sin 2 \theta$ |  |  |  |  |
| $\mathrm{f}\left(\frac{\pi}{5}\right)=-0.3227 \ldots<0$ |  |  |  |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 10(c)(i) | Differentiates $\sin 2 \theta$ to obtain $2 \cos 2 \theta$ OE <br> PI by correct $\theta_{2}$ or $\theta_{3}$ <br> PI by sight of $2 \cos \frac{2 \pi}{5}$ | 1.1b | B1 | $\begin{aligned} & \mathrm{f}(\theta)=\theta-\sin 2 \theta \\ & \mathrm{f}^{\prime}(\theta)=1-2 \cos 2 \theta \\ & \theta_{n+1}=\theta_{n}-\frac{\theta_{n}-\sin 2 \theta_{n}}{1-2 \cos 2 \theta_{n}} \\ & \theta_{2}=1.4732575 \ldots \\ & \theta_{3}=1.0413241 \ldots \\ & \theta_{3}=1.041 \end{aligned}$ |
|  | Obtains a correct expression for $\theta_{n}-\frac{\theta_{n}-\sin 2 \theta_{n}}{1-2 \cos 2 \theta_{n}}$ <br> Accept use of ANS or $\frac{\pi}{5}$ <br> Condone missing or incorrect subscript <br> PI by correct $\theta_{2}$ or $\theta_{3}$ <br> AWRT $\theta_{2} 1.473$ | 1.1a | M1 |  |
|  | Obtains correct $\theta_{3}$ AWRT $\theta_{3} 1.041$ | 1.1b | A1 |  |
|  | Subtotal |  | 3 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| $\mathbf{1 0 ( c ) ( \text { (ii) }}$ | Explains that more iterations <br> could be used <br> Accept keep on using Newton <br> Raphson, keep re-iterating | 2.4 | E1 | Use more iterations |
|  | Subtotal |  | $\mathbf{1}$ |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :---: |
| $\mathbf{1 0 ( c ) ( \text { (ii) }}$ | States that $\mathrm{f}^{\prime}\left(\frac{\pi}{6}\right)=0$ | 2.4 | E1 |  |
|  | Explains a general reason for <br> the Newton Raphson iteration <br> not to converge to a particular <br> root <br> Accept only <br> too close to a stationary <br> point <br> the value is on a <br> stationary point <br> the tangent does not cross <br> the $x$-axis <br> it converges to a different <br> root <br> the formula is undefined <br> Accept equivalents to these five <br> bullet points only | 2.4 | E1 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 11(a) | Substitutes $x=-2$ into $\mathrm{p}(x)$ Condone missing brackets | 1.1a | M1 | $\begin{aligned} \mathrm{p}(-2) & =(-2)^{3}+(b+2)(-2)^{2}+2(b+2)(-2)+8 \\ & =-8+4 b+8-4 b-8+8 \\ & =0 \end{aligned}$ <br> Hence $(x+2)$ is a factor of $\mathrm{p}(x)$ for all values of $b$ |
|  | Demonstrates clearly that $p(-2)=0$ <br> Must see numerical evaluation of powers of -2 and either $-8+4 b+8-4 b-8+8=0$ <br> or $-8+4(b+2)-4(b+2)+8=0$ <br> or $-8+(b+2)(4-4)+8=0$ | 2.1 | A1 |  |
|  | Concludes and states that $(x+2)$ is a factor for all/any values of $\boldsymbol{b}$ | 2.4 | R1 |  |
|  | Subtotal |  | 3 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 11(b)(i) | Sketches cubic graph with correct orientation and two turning points | 1.2 | B1 |  |
|  | Sketches any cubic that would only ever meet the $x$-axis at exactly two points | 2.2a | M1 | $\}_{(0,8)}$ |
|  | Sketches a correctly orientated cubic graph that has a <br> - single root labelled $x=-2$ <br> - $y$ intercept labelled at 8 <br> - repeated root on the positive $x$-axis Ignore any value shown at the other root | 1.1b | A1 |  |
|  | Subtotal |  | 3 |  |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :---: | :---: | :---: | :---: |
| 11(b)(ii) | Deduces a pair of possible factors of $\left(x^{2}+b x+4\right)$ <br> Either $(x+2)^{2}$ or $(x-2)^{2}$ or $(x+1)(x+4)$ or $(x-1)(x-4)$ or <br> Uses $b^{2}-4 a c$ OE <br> PI $b=4$ or $b=-4$ <br> or $b^{2}-16$ seen | 2.2a | M1 | $\begin{aligned} & b^{2}-4 a c=0 \\ & b^{2}-16=0 \\ & \Rightarrow b= \pm 4 \end{aligned}$ <br> $b=4$ gives only one point of intersection $\therefore b=-4$ |
|  | Identifies the quadratic factor as $(x-2)^{2}$ <br> or <br> Obtains $b^{2}-16=0 \mathrm{OE}$ <br> PI by $b= \pm 4$ or $b=-4$ | 2.1 | R1 |  |
|  | Obtains either $b= \pm 4$ or $b=-4$ | 1.1a | M1 |  |
|  | Rejects $b=4$ giving a reason and concludes $b=-4$ Valid reasons would be: <br> - only one factor or root <br> - only one point of intersection with $x$-axis <br> - it would be $(x+2)^{3}$ which only has one point of intersection | 2.4 | R1 |  |
|  | Subtotal |  | 4 |  |
|  | Question 11 Total |  | 10 |  |

| $\mathbf{Q}$ | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :--- |
| 12(a)(i) | Uses $\frac{a}{1-r}$ | 1.1 a | M 1 | $S_{\infty}=\frac{1}{1-\frac{1}{2}}=2$ |
|  | Obtains 2 | 1.1 b | A 1 |  |
|  |  | Subtotal |  | $\mathbf{2}$ |

| Q | Marking instructions | AO | Marks | Typical solution |
| :---: | :--- | :---: | :---: | :---: |
| 12(a)(ii) | Deduces <br> $a=\frac{1}{2}$ and $r=\frac{1}{2}$ <br> or <br> Deduces <br> $\sum_{n=1}^{\infty}\left(\sin 30^{\circ}\right)^{n}=$ their part (a)(i) -1 <br> or <br> Deduces the answer is half of <br> their answer in part (a)(i) | M1 |  | $\sum_{n=1}^{\infty}\left(\sin 30^{\circ}\right)^{n}=\frac{1}{2}+\frac{1}{4}+\ldots$ |
|  |  | 1.1 b | A 1 | $=\frac{\frac{1}{2}}{1-\frac{1}{2}}$ |
|  | Obtains 1 | Subtotal |  |  |
